Content

- ☐ Measure Solution Performance
- ☐ Analyze Performance Measures
- ☐ Assess Solution Limitations
- ☐ Assess Enterprise Limitations
- ☐ Recommend Actions to Increase Solution Value

Assessment

Assess Proposed Solution

Determine how closely they meet stakeholder and solution requirements.

Allocate Requirements

Process of assigning stakeholder and solution requirements to solution components and to releases.

Assess Organizational Readiness

Assess whether the organization is ready to make effective use of a new solution.

Transition Requirements

During the transition period the enterprise may need to operate both solutions in parallel, move information between the new and old solution, conduct training, etc.

Validate

Validate Solution

Determine the most appropriate response to identified defects to ensure that a delivered solution meets the business needs on an ongoing basis.

Problems will be reported and prioritized for resolution.

When a problem is identified with the solution, regardless of whether the requirement was correctly specified or not, the business analyst will be able to help determine the most appropriate action.

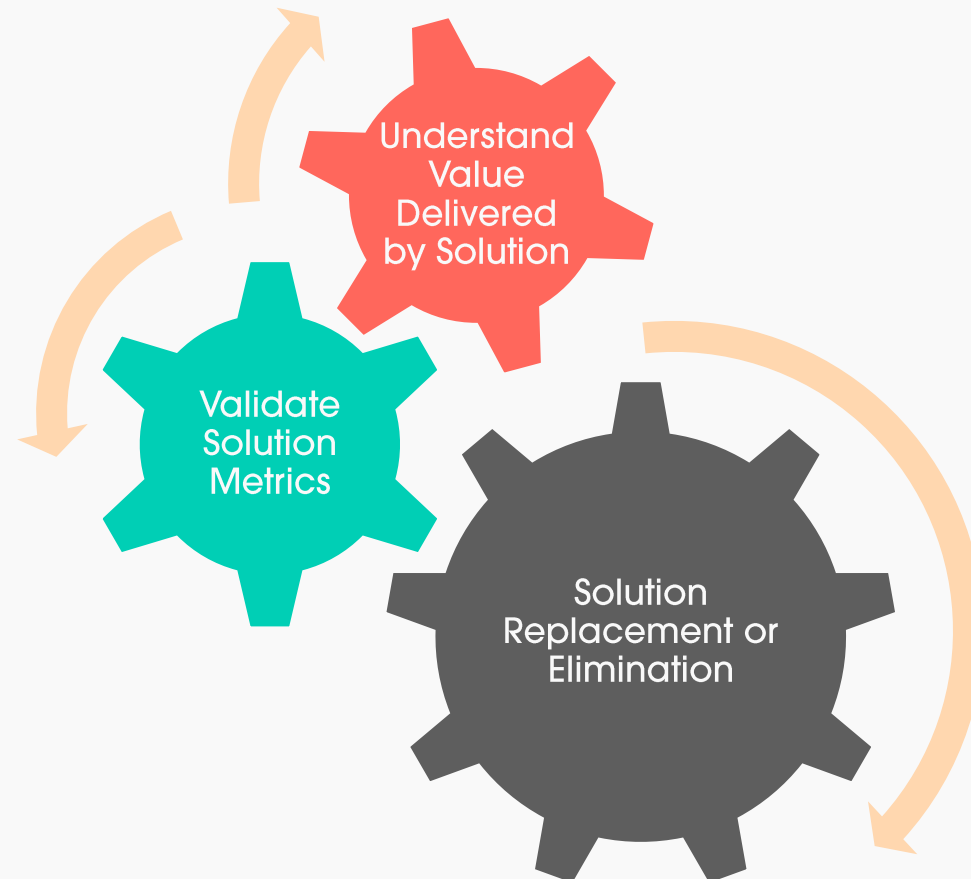

Performance

Evaluate Solution Performance

Solution evaluation involves investigating how a solution is used after it is deployed, and assessing the effect it has had, both positive and negative.

It may also be referred to as post-implementation assessment when performed immediately following the completion of a Project.

Thank you!!

“Fail early, fail often, but always fail forward.”
- John C. Maxwell
